

Errata 6/16/08
**Arsenic, Mercury, and Selenium in Fish Tissue from Idaho Lakes and Reservoirs:
A Statewide Assessment**

Executive Summary, last paragraph.

Localized selenium fish tissue concentrations may be a concern in southeast Idaho.

Appendix B: Lakes actually sampled.

Lake 43, Black lake was omitted from the table. An earlier correction of the table then omitted lake 100, Henry's Lake.

Lake 62, named Gamlin Lake in GNIS is also known as Gamble Lake

Lake 64, name Bishop Lake in GNIS, is better know as Island Park Reservoir

Appendix C: Summary of Fish Lengths and Weights

There are no length and weight data for fish from American Falls Reservoir because none were obtained.
